

SALES BATTLE CARD

COMPANY OVERVIEW	PRODUCTS	PRICING
Tabit is an Israeli-based point-of-sale (POS) company that brought its mobile first platform to the U.S. and is now headquartered in Aventura, FL. Tabit offers a wide variety of products for the modern restaurant operation. The company is payment agnostic and does not offer direct sales. Tabit's strategy is to convert the reseller channels with attractive partner programs that allow partners to continue collective payments revenue, unlike Toast, Shift4, and other competitors.	Program/Features: • TabitPAD: Main POS system (iPad based) • TabitGuest: Online Reservations & Table Management • TabitOrder: Native Online Ordering • TabitInsight: Business Intelligence (not real time) • TabitChef: Real time mobile reporting • TabitWheels: Delivery Driver web app (BYOD) • TabitKitchen: Cloud/browser based KDS	Pricing is variable from dealer to dealer. Some dealers package networking equipment into the price which makes it more difficult to determine pricing. However, generally speaking, the monthly subscription cost is about \$49 per mobile device.

COMPETITOR STRENGTHS	COMPETITOR WEAKNESSES
Mobile-first, iPad-based POS • All mobile devices are full POS stations; no need for standalone terminals • Increases communication time to the kitchen Cloud based • Centralized database that links all the other Tabit products together, like online ordering and reservations Reseller focus • Attractive partner programs and aggressive partner recruitment; no direct sales competition for resellers Rich ecosystem of native solutions • Online Ordering, delivery, reservations, business intelligence, and KDS all integrated with each other	No offline mode (yet) • Tabit recommends a redundant WAN connection which adds an additional cost; otherwise, merchants are left unable to process transactions Inconsistent customer experience • No direct implementation teams or support means the quality of experience is up to the dealer/reseller/partner • No remote support capabilities Complex configuration and setup • Very clunky back end; difficult to set up and configure properly • Partners need a lot of training to deliver basic service
HOW TO ADDRESS THEM	HOW TO ADDRESS THEM
iPads are costly and Wi-Fi can be unreliable • Solely depending on a Wi-Fi connection for syncing terminals is a huge risk • The most likely downtime is during high volume SkyTab POS is also cloud-based • SkyTab POS is also cloud based with a robust ecosystem of products that work together, including payments Reseller and direct sales model • Mature reseller community with nationwide coverage of local resources to install, train, and support • New strategic direct sales team with SkyTab focus SkyTab POS has native solutions AND integrations • KDS coming soon; business intelligence and delivery capabilities through Marketplace	SkyTab POS offline mode • Merchants can still process credit card payments offline Robust customer service • Great service from Shift4 or resellers • Support agents can remote into terminals to control them Easy configuration and setup • Very intuitive back office site • Most configuration options available from the POS itself, including menu and employee management, make POS more manageable in-store.
